

Digital Literacy Project Report

Name: Burra Hansini

Registration Number: 25BAI111221

Branch: CSE-AI & ML

Year: First Year

Course Code: CSE0001

Introduction:

This project was completed as part of the Digital Literacy course, where I was assigned the role of a Student Digital Ambassador. The objective of this project was to understand and apply digital skills in a practical way, including creating a professional online presence, using digital tools, and promoting safe and responsible use of technology. Through this project, I explored various platforms like GitHub, LinkedIn, and HackerRank, and created resources such as an infographic, a digital portfolio, and a cybercrime awareness guide. This project helped me understand how digital literacy is important not only for academic purposes but also for personal and professional growth.

Task-1

I created a digital literacy awareness infographic using Canva. The infographic is titled 'Digital

Literacy: Smart Skills for Smart Students' and focuses on key aspects such as understanding digital literacy, useful tools for students, safe internet practices, and maintaining a professional online presence. I included tools like Google Docs, GitHub, LinkedIn, and Canva to highlight their importance in academic and career growth.

The design uses a clean and structured layout with simple icons and minimal text to make the information easy to understand. My goal was to ensure that any student viewing the infographic can quickly grasp the importance of using technology effectively and responsibly.

One interesting part of this task was converting theoretical concepts into a visual format. It helped me think from a user's perspective. However, I found it slightly challenging to balance design and content without overcrowding the infographic. Overall, this task improved my creativity and understanding of digital literacy.

Task-2

I created my digital portfolio using GitHub, LinkedIn, and HackerRank. GitHub is used to showcase projects and track progress in coding, while LinkedIn helps in building a professional network and connecting with industry experts. HackerRank is a coding practice platform that helps improve problem-solving skills.

On GitHub, I created a profile README that highlights my academic background and learning goals. On LinkedIn, I added my education details and created a basic professional profile. On HackerRank, I completed a beginner-level coding challenge to understand the platform.

Over the next four years, I plan to actively use these platforms to build my skills, share projects, and connect with professionals. This will help me prepare for internships and future career opportunities.

Task-3

I explored platforms like HackerRank and Google Forms as part of this task. On HackerRank, I completed a beginner-level coding problem, which helped me understand how coding platforms work and how they can improve problem-solving skills. It gave me confidence to start practising regularly.

I also created a Google Form titled 'Are You Digitally Smart?' which includes five questions related to digital literacy and online safety. The form was designed to test basic awareness among students in a simple and interactive way. I included both multiple-choice and short-answer questions to make it engaging.

This task helped me realize the importance of both technical and collaborative tools in academics. Platforms like HackerRank help in skill development, while tools like Google Forms help in communication, data collection, and interaction with others. In the future, I can use these tools for quizzes, feedback collection, and academic collaboration.

Task-4

A common issue in digital communication occurs when students use informal language while writing emails to professors. For example, a student once sent an email without a proper subject line, greeting, or respectful tone. As a result, the email was either ignored or not taken seriously, leading to missed opportunities and delays in communication.

This situation highlights the importance of maintaining professionalism in digital communication. Emails should always include a clear subject line, proper salutation, structured content, and a polite closing. Using respectful language ensures that the message is understood and appreciated by the recipient.

Effective email communication is an essential skill for both academic and professional environments. By following proper

etiquette, misunderstandings can be avoided, and communication becomes more efficient and impactful.

Task-5

While researching cybercrime, I was surprised to learn how simple and common techniques are used to deceive people, especially in cases of UPI fraud. Many users are unaware that scanning a QR code or approving a payment request can result in money being deducted instead of received. This lack of awareness makes students and new users easy targets.

This task helped me understand the importance of being cautious while using digital platforms, especially for financial transactions. Even a small mistake, such as sharing an OTP or clicking on an unknown link, can lead to serious consequences.

As a result, I will be more careful while making online payments and will always verify sources before taking any action. This experience has encouraged me to adopt safer digital habits and spread awareness among others.

CONCLUSION:

This project helped me understand the importance of digital literacy in today's world. I learned how to use various digital platforms effectively, maintain a professional online presence, and communicate responsibly. It also made me aware of online risks and how to stay safe.

Overall, this project was a valuable learning experience that improved both my technical and practical skills. It has motivated me to continue using digital tools in a meaningful and responsible way in the future.
